Response to Arguments

Applicant's arguments filed on 6/10/04 have been fully considered but they are not persuasive. Applicant states that Rijckaert does not teach controlling the speed of a reproduction device based upon whether valid reproduction data is reproduced at a first trick play speed. Since the applicant does not claim an automatic switch to another trick play speed in the absence of reproduced valid first trick play reproduction data, the user can manually change the trick play speed in the absence of reproduced valid first trick play reproduction data.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3,6 and 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Rijckaert (US6222981).

Regarding claims 1, 6 and 9 Rijckaert shows a reproducing device 140 (fig. 14) including:

- Transport means 250 (fig.14) (col.27 ll.3-5)
- Reproducing means (col. 27 ll.1-15)
- Test means 270 (fig.14) (col.27 ll.56-67)

Regarding claim 2,10 Rijckaert shows that the reproducing means are adaptable to the DVHS standard (col.1 ll.47-49)

Regarding claim 3,11 Rijckaert shows that the second tick=play speed corresponds to +/- 12 times the normal play speed (col.3 ll.49-51)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Higurashi(US6031679) in view of Rijckaert (US6222981).

Rijckaert teaches a reproducing device with a magnetic tape having a normal play speed, but does not specify a value for the normal play speed. A reproducing device with a normal play speed of 16.67mm/s is shown in Higurashi (col.13 ll.61-67). It

Art Unit: 2613

would have been obvious to one of skill in the art to specify the value of the normal play speed of magnetic tape through a reproduction apparatus.

Allowable Subject Matter

Claims 5, 7-8 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
